PPS Student Centered Learning Instructional Priorities

Culture of Learning

If teachers have **high expectations**, and students engage in the work of the lesson from start to finish with a sense of urgency...

Student Ownership

...then students will demonstrate ownership by:

- Explaining their thinking using **academic language** in various modalities throughout the learning process
- Displaying **persistence** with **challenging tasks**
- Completing instructional tasks, volunteering responses, **asking appropriate questions**, building on or questioning each other's responses using **content specific language**

...thus fulfilling the instructional priority of student centered learning.

The purpose of instructional priorities for a school system is to provide a focused framework that guides teaching and learning across all schools within the district. These priorities are designed to align educational practices with the district data sets.

Here's a more detailed breakdown:

1. **Clarity and Focus:** Instructional priorities help to clarify what is most important for student learning, allowing educators to concentrate their efforts on the most critical areas. This focus ensures that all students receive a coherent and high-quality education.
2. **Alignment with Goals:** They align instructional practices with the district's strategic goals, such as improving literacy rates, closing achievement gaps, or increasing graduation rates. This alignment ensures that all instructional activities contribute to broader educational objectives.
3. **Consistency Across Schools:** By establishing clear instructional priorities, the district ensures that there is consistency in what is taught and how it is taught across different schools. This helps to provide an equitable education for all students, regardless of the school they attend.
4. **Resource Allocation:** Instructional priorities guide the allocation of resources, including time, funding, and professional development. By focusing resources on these priorities, the district can better support teachers and students in achieving desired outcomes.
5. **Professional Development:** These priorities inform the professional development provided to educators, ensuring that training is relevant and directly supports the instructional goals. This helps to build teacher capacity and improve instructional practices.

6. **Accountability:** They provide a basis for evaluating the effectiveness of instructional practices and programs. By setting clear priorities, the district can monitor progress and make adjustments as needed to improve student outcomes.
7. **Student Success:** Ultimately, the purpose of instructional priorities is to enhance student learning and success. By focusing on key areas, the district can ensure that students are developing the skills and knowledge they need to succeed in school and beyond.

In summary, instructional priorities serve as a roadmap for the entire school system, ensuring that all efforts are aligned toward achieving the best possible educational outcomes for all students.

What the data looked like? 2023-2024	What will look different in the data? 2024-2025	Danielson Alignment for Data Collection 2024-2025	TNTP Progress Monitoring Alignment for Data Collection 2024-2025
Based on TNTP progress monitoring, 61% of ELA and 44% of Math questions and tasks attend to words, phrases and sentences within the content that matters most to build students' vocabulary and deepen understanding of the grade level/content area. Students use precise content language in their explanations and discussion.	Through coaching cycles, observations and walkthrough data...we will see an increase in the use of academic language by students.	1C, 3A	ELA: (2D) Math: (3F)
